

**Option 1**, a two-leg route, would come less often (about every 40 minutes), but riders would have faster, more direct trips to their destinations. See the map (above) for approximate travel times. Gregory Heights riders would call ahead for rides to/from Seahurst.

**Option 2**, a clockwise loop, would come more often (about every 30 minutes), but some riders would have longer trips because of the one-way loop. To find the approximate time of a specific trip, add the times listed on the map in the direction of the loop. Gregory Heights riders could either catch the scheduled service shown on the map or call for a ride elsewhere in the flexible service area and then continue on the scheduled loop route.
